FOR IMMEDIATE RELEASE

Techlam celebrates 32 years of innovation and excellence

Levin, New Zealand, 7th November 2024 – Techlam, New Zealand’s largest glulam facility and a leading provider of engineered timber products, is proud to celebrate its 32nd anniversary. Founded in 1992 by Andrew Hamilton, Techlam has grown from a small business operating out of a garage to a recognised industry leader, serving customers across New Zealand, Australia and the Pacific.

“We are thrilled to mark this significant milestone,” says Brett Hamilton, Managing Director at Techlam. “Our longevity is a testament to the hard work and dedication of our team, the trust our customers place in us, and our commitment to continuous innovation and operational excellence.”

Techlam's beautiful and award-winning glulam structures can be seen in projects such as Wellington International Airport, the Hutt Valley Health Club and the CCCS Jubilee Church in Western Samoa. More recently, Techlam supplied the curved laminated timber beams for the new wing of Jackson Orchard’s packhouse in Central Otago.

Furthering its commitment to innovation and efficiency, Techlam recently acquired a new 6 Axis CNC Line. This state-of-the-art Oikos XL machine allows for automatic management and continuous processing of large engineered timber elements with high accuracy. This investment, part of Techlam’s ongoing sustainable manufacturing project, not only increases production efficiency but also significantly reduces waste, contributing to the company’s goal of reducing landfill waste by 25%.

Techlam's success can be attributed to this strong team, its focus on customer satisfaction, cutting-edge technology, and its core values: Honouring Commitments, Thriving on Challenges, and Teamwork.

“Our team is like the glulam we create,” says Brett Hamilton. “We take individual strengths and combine them to form a single, strong unit. Our culture is the glue that holds it all together.”

As the company looks ahead, it remains committed to sustainability and achieving its vision of becoming Australasia’s leading manufacturer of engineered timber products.

About Techlam

Techlam is a New Zealand owned and operated company that designs, manufactures, and supplies engineered timber products. Built on traditional foundations, Techlam combines innovation with integrity, trust and family values. Techlam is committed to environmental responsibility, with initiatives such as a sustainable manufacturing project to reduce waste by 25%.
